Rotor/ Mount Charts

Disc Mounting Configuration

Use the charts below and on the following page to identify the parts you intend to use, then reference the charts on the reverse side to determine the bracket and/or spacer configuration to mount your disc brake caliper to your frame/ fork. Consult your retailer for the proper rotor sizes for your bicycle.

⚠WARNING - CRASH HAZARD

Choose the correct bolt length for proper thread engagement. Riding a bike with improper bolt engagement can allow the brakes to disengage from the bicycle, which can lead to a crash and serious injury or death to the rider.

Charts are color coded according to configurations:

- Road/ Mountain Configurations
- Mountain Only Configurations
- Road Only Configurations

Determine your desired rotor size to ensure it is combatible with your fork and frame.

⚠WARNING - CRASH HAZARD

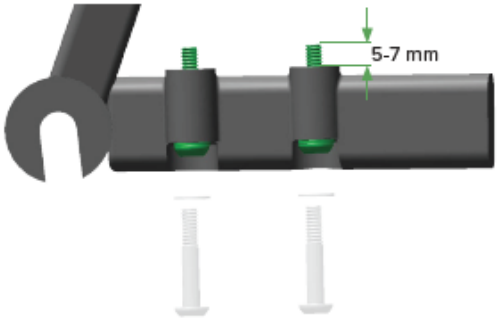

Choose the correct bolt length for proper thread engagement. Riding a bike with improper bolt engagement can allow the brakes to disengage from the bicycle, which can lead to a crash and serious injury or death to the rider.

There must be 9-13 mm of mounting bolt thread engagement when mounting brake calipers to forks and frames either with or without brackets and/or spacers. Riding a bike with improper bolt engagement can allow the brakes to disengage from the bicycle, which can lead to a crash and serious injury or death to the rider.

There must be 5-7 mm of mounting bolt thread engagement when mounting brake calipers to forks and frames with flat mount hardward and brackets.

Standard or CPS Mounting Configurations require 9-13 mm of thread engagement

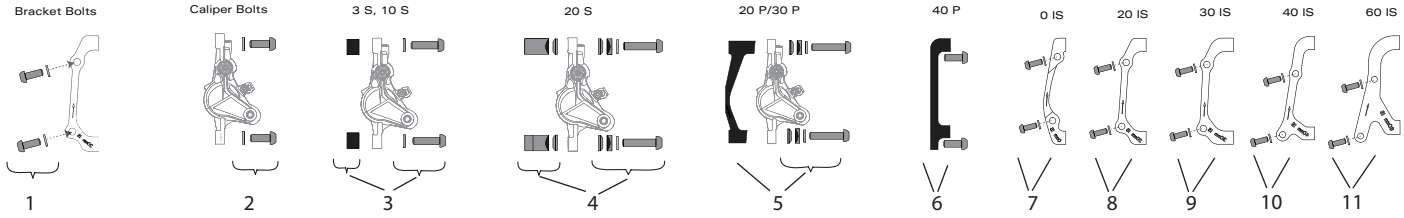

Flat Mount Configurations require 5-7 mm of thread engagement
